What Science Has Found Out Lately in Regard to Them.

Examining Samples of Blood for the Germs-The Latter Are Animal and Not Vegetable.

Science has engaged in a warfare against disease and has already won some great purpose comes solely from its power to victories the latest of which is over diph- dry up moist soil by absorbing water. The victories, the latest of which is over diphtheria. Malaria-a malady long considered so mysterious as to be well-nigh beyond the reach of investigation-has not escaped attack, and physicians now make diagnoses calptus have been set out in various parts of this complaint by examining samples of blood taken from the patients. In such cases the germs of the disorder are discovered by means of a microscope. It has been ascertained that they are very minute animal parasites which feed upon the red corpuscles.

The prick of a needle suffices to draw from the finger a drop of blood, which is very profitable industry, and the market spread upon a piece of glass. Heat is used ply of bark upon the efforts of South to fix the blood upon the glass with some American gatherers, who recklessly despread upon a piece of glass. Heat is used sort of permanence, and then certain stains stroyed the prospect of future crops are applied to it. These stains, which are antline dyes, color the malaria germs blue and the protoplasm of the blood-cells red. Being thus brought out in sharp contrast the germs may be discerned under the microscope, though they are very small and difficult to find, so that a magnifying power of 1 600 diameters is required.

The germs belong to the lowest form of animal life, being protozoa. They feed upon the red corpuscles of the blood, which are thus destroyed. At the beginning they are merely bits of protoplasmic jelly, without any particular shape, but later on they develop long hair-like oars to paddle about Then they become free swimmers and make their way through the veins and arteries, following the tide of the circulation. They multiply by splitting up, the young ones attacking the red corpuscles, and so the round of their life history goes M. McCachran (alternate) of Newville, Pa.:

These facts have been ascertained only very recently. Inasmuch as millions of people in this country suffer more or less from malaria, they possess more than or-dinary interest. It is not surprising that the destruction of the red corpuscies by the of North Bridgton, Maine, and B. B. Watts parasites should cause sickness after a of St. Louis, Mo. while. Chills and fever are the most familiar symptoms, but in advanced cases the blood is found to contain numerous par-ticles of black or brown pigment. Frequently death ensues, and the liver and spleen are seen to have become much enlarged and to be of a peculiar brownish or blackish color.

Here is, in fact, a very dangerous and destructive disease. Were it not for qui-nine it would cause a great mortality. But that precious alkaloid is a deadly poison to all kinds of protozoa, and the malaria germs in the blood quickly succumb to it. A few doses of the medicine would kill all of them that might happen to be in the body, save for one fact; in its earliest stage the parasite is enveloped in a membrane, which protects it from the quinine. Thus it is necessary to keep on with the desing for some time, in order that no young ones may be left to develop and continue the mischief.

It used to be supposed that malaria the populists and trouble may yet follow. germs were absorbed from the air, but it is now known that they are taken into the body in drinking water. There is no cer-tainty, however, that they may not obtain an entrance to the system through the breathing organs also. First-rate evidence as to infection by water was furnished a few years ago by the case of some French in Algeria. Three shiploads of soldiers left the country together, and one of the vessels was furnished with water in casks from a swampy pond. The other two ships got their water from a river. During the voyage malaria in a malignant form attacked the men on board of the vessel that had the swamp water and many of The other two ships did not suffer at all. Yet, all of the soldiers had serious for a time, and lived for a long time in the immediate vito their beds yesterday.

cinity of the swamp aforesaid.

Man is not the only animal that suffers from malaria. The parasites are found in the blood of pigeons and crows, and even in that of turtles and frogs. Symptoms of land, has been sentenced to six months malarial fever have been artificially pro-

MICROBES OF MALARIA duced in those creatures by introducing the germs into their veins. Sparrows are particularly subject to malaria, and their biood is commonly found to be full of the microbes. Some differences of species seem to exist, but the protozoa are very much like those which invade the circulation of the human body.

The conditions under which the para-

sites are propagated in earth or water are not positively known. Some authorities assert that they exist originally in the soil Land that has been wholly dry for a long period will sometimes appear to become a source of malarial poisoning when saturated by heavy rains. On the other hand all swamps are not necessarily malarious. If the eucalyptus tree is of any value as a foe to malaria, its usefulness for that notion that it destroys the germs of the disease by its effluvium or in any other way may now be regarded as an exploded delusion. Immense plantations of the euof the world with a view to killing malaria, but the results obtained have not been satisfactory. The experiment has been vainly tried in the miasma-producing eighborhood of Rome.

Within the last few years quinine has become one of the cheapest of medicines, thanks to the extensive cultivation of the tree from which it is obtained. This branch of agriculture has become a great and of the world no longer depends for its supcutting down the trees. By this wasteful method whole forests were wiped out, and the wild plant became so scarce that it could only be obtained in the most distan and inaccessible regions of its native mountains. The einchona calisaya is a lofty tree, attaining a diameter of six feet. Its original habitat was the declivities of the Andes, 6,000 to 7,000 feet above the sea, in Bolivia and southern Peru. Rarely, nowadays, does the exploring naturalist discover a full-grown specimen.

West Point Cadets Appointed.

Cadet appointments to the Military Academy have been made as follows: Thomas W. Tipton of Bloomington, Ill.; Frederick J. Bean (alternate) of Moroa, Ill.; Stanley B. Embick of Boiling Springs, Pa.; Thomas L. N. Bushfield of Elizabethtown, Ky.; S. I. M. Major (alternate) of Falls of Rough, Ky.; Charles M. Bundell of Sharon, Pa.; Joseph H. Graves of Laketon, Ky.; G. B. Lutin (alternate) of Moscow, Ky.; C. Mc. Stevens of Brewton, Ala.; Walter S. Brown

Legislators Nearly Come to Blows. A sensational scene occurred in the Alabama state senate the other day. A heated debate arese over a bill authorizing the expenditure of money for an interstate encampment. Mr. Goodwin, the leading populist senator, who is contesting Representative Cobb's seat in Congress, made some allusions to fraud in recent elections, Mr. Pettus, president of the senate, took up the gauntlet thrown down by Mr. Goodwin, lenying the charge, and the debate grew heated. The lie was given and the two friends rushed between just in time to prevent blows. The scene was very exciting for a few moments, every senator be-ing on his feet. Notwithstanding, the storm blew over without serious trouble. It has greatly widened the breach among

Many Fainted at a Ball.

Escaping gas at the new Wabash shoe factory in Wabash, Ind., which was dedicated Tuesday night, and where a large ball was being held under the auspices of the local lodge of the Knights of Pythias, made over 200 persons ill. The ball room was closed tight, and as the chimneys of the building were very small, and did not carry off the natural gas fumes, the poisonous air was forced into the room. Its effects were not noticeable until 9 o'clock, when women began to faint, and at one time twenty-five were stretched unconscious in a large room. Their condition was rious for a time, and they were confined

Dangerous Insects Introduced Into the United States From Abroad.

Facts About the Cargo of Weevil-Infested Rice That Arrived From Rangoon the Other Day.

"Funny how little it takes to get up a scare," said United States Entomologist L. O. Howard to a Star writer. "Here is a great alarm about the arrival at San Francisco of a rice-laden vessel from Rangoon, Burmah, with her hold swarming with insects. It is stated that, when the hatches were removed, the 'bugs' flew out in such numbers that the sailors could not descend for fear of suffocation. Letters addressed to the Department of Agriculture express fears lest these winged immigrants will start a plague in the United States.

"The fact is that the insects in question, specimens of which have reached me, are grain-eating weevils, already sufficiently common in this country. We have quite a number of species of such feeders on stored grain, and knowledge respecting them has been small hitherto. Recently, however, the division of entomology has been giving a good deal of study to them, and the re-sults will be set forth before long in a special bulletin. Every housewife is inter-ested in this subject, because her flour, cornmeal, &c., are quickly attacked by these enemies if kept unsealed. The beetles are always eagerly in search of such food in which to lay their eggs, and presently the stuff is swarming with larvae and unfit

"During the past year two little beetles, popularly known as 'flour weevils,' have oc-casioned a good deal of alarm among milin patent foods. They are very ready to attack such patented articles of diet as contain flour or other farinaceous stuff. The eggs are deposited in the flour, and these and the young larvae are so minute and pale in color as not to be noticed. After being sealed up in boxes and barrels for a while, the adult insects are developed and the merchandise is soon ruined. Aside from the trouble caused to manufacturer, dealer and purchaser, these beetles are highly objectionable, a few specimens being sufficient to give a disagreeable odor to the infested material.

What the Weevil Thrives On. "Another destructive beetle is quite minute and of a reddish brown color. It seems to do more damage than any other kind of weevil, attacking wheat, flour, oatmeal, corn and even peanuts. It has been observed to feed upon snuff, orris-root, baking powder, rice chaff, graham flour and red pepper. During the last year this beetle has been very destructive in Massachusetts.

"The insect most importantly represented in the cargo of rice from Rangoon was doubtless the common rice weevil, which originated in India, and has been diffused by commerce, until now it is at home in nearly all grain-growing countries. It was probably imported into Europe with the introduction and earliest cultivation of rice, in the fifteenth century. From thence t was brought to America, and at present it is probably as widely distributed and as injurious as any known insect. It occurs in every state and territory in the Union, and occasionally invades Canada and even Alaska. In the southern states it is a very

"Although, as its name implies, this weevil is partial to rice, it thrives at least equally well on wheat and maize. It also breeds freely in the cultivated varieties of sorghum and in barley, rye, hulled oats, buckwheat and chickpeas. When abundant in store houses and groceries the adult beetles invade boxes of crackers, cakes, yeast cakes, barrels and bins of flour and meal, and can subsist for months on sugar. They are even known to burrow into grapes and mulberries. "In old times long voyages were neces-sary in carrying grain from the east, and the rice weevil thus had time to do a great deal of damage during transportation, tire cargoes being lost sometimes. Even now the losses caused in this way are apt considerable. Suppose that a few hundreds of immature weevils were in the

cargo of rice that was dispatched from Rangoon to San Francisco, There was time during the voyage for three or four generations to develop. When it is considered that each female insect lays hundreds of eggs, it will be seen that the cargo on its arrival might easily have been tenanted by swarms numbering millions. The whole of the grain might have been rendered unfit for food. If only a part was spoiled, the rest could be saved by careful winnowing.

Cosmopolitan Insects.

"There is nothing effective that can be done to protect a cargo of grain from insects while on shipboard. In store houses and elevators protection is afforded by simple means. When the building is closed on Saturday evening receptacles containing sulphide of carbon may be put in various places. The doors and other openthe sulphide sinks into every cranny and kills the beetles and their larvae. It is not practicable to do this during the week, because of danger of explosions. "Commerce has carried everywhere the insects which injure stored grain, until

nearly all of these creatures have become practically cosmopolitan. It is the same United States we have about one hundred species of scale insects, and of this number probably forty have been introduced from other countries. These forty, moreover, include nearly all of the worst species. Introduced species become far more injurious here, as a rule, than in their original homes. The red scale of the crange in Florida is an importation from the West Indies or South America; the red scale of the orange in California troduced from the Pacific Islands. The dangerous 'fluted' scale of the Pacific coast imported from Australia. The San Jose scale, which of late has been making a most destructive onslaught on many eastern orchards, is also, probably, an Australian species.

Fond of Travel.

"The codling moth is European, and so is the principal currant worm. The grapeberry moth originally inhabited the region of the Mediterranean. The European gipsy moth, one of the most ravenous defoliators of fruit and shade trees known to entomologists, has for the last ten years made itself so conspicuous in parts of Massachusetts that the state government has expended over \$300,000 in trying to stamp it out. The European leopard moth, now confined to the vicinity of New York city, is an insect which in the larval stage bores into the twigs of many trees. It threatens to spread and do great damage. A new pear borer, imported in nursery stock from Europe, has begun to spread in the state of New Jersey. It is capable of killing a vigorous pear tree outright in two seasons. "I have recently made an effort to learn something of the injurious insects of Mexico, anticipating that the new activity in railway building from the United States into that country cannot but result in carrving dangerous insects across our borders. Already a most serious enemy to the cotton crop has crossed from Mexico into Texas and threatens great damage. "Meanwhile the harlequin cabbage bug

is steadily advancing from the south; the potato tuber moth bids fair to continue its eastward progress from Colorado, into which state it has been brought from California, and the sweet-potato root borer is working up through our southern states from Florida and Texas. The clover-root borer and the clover-leaf weevil are working westward through Indiana and Michigan, and the hop-plant louse and the pearblister mite, well-known eastern insects, have recently made their first appearance on the Pacific coast. The eastward spread of the Colorado potato bug from the plains of the west, at first slow, and accomplished only by the flight of the perfect insect, but afterwards carried on in great jumps as sisted by the railroads, is a startling case within the recollection of every one. injurious insects have been the fruit growers of Californa. That state was the first to pass quarantine and inspection laws, and such regulations will have to be adopted eventually by all of the states. Nursery stock and fruit brought into California or offered for sale there are inspected and, if found infested, are submitted to fumigation. Penalties are enforced for the expos-ing of infested fruits for sale in the markets. Nothing in the law, however, forbids the sending of infested fruit or stock to the east or elsewhere, however."

CAPITOL TOPICS.

Senera Indian Lands. The Senate committee on Indian affairs

today decided upon a favorable report on Senator Hill's amendment to the Indian appropriation bill providing for the purchase of the Ogden Land Company, in the lands of the Seneca Land Company, in New York state, changing the price to be paid from \$10 to \$5 per acre. There are about 50,000 acres of the land, and it is understood to be the intention to open it to settlement if the amendment becomes a law. The claim of the Ogden company dates back a century.

Pacific Railroads.

The House committee on Pacific railroads today discussed the prospects of legislation. Chairman Reflly was directed to confer with the Attorney General and the Secretary of the Treasury as to whether any legislation is necessary to protect the interests of the United States under the existing status. When the committee adof Mississippi to report the Reilly bill back to the House was pending.

Lake Michigan and Wabash Canal. Representative Cooper of Indiana spoke to the House committee on railways and canals today in support of the joint resolution for a survey for a ship canal to connect the headwaters of the Wabash with Lake Michigan. It provides for a survey to be made by a commission consisting of two citizens of Indiana, one of them a civil engineer, and also of representatives of the engineer department of the army Mr. Cooper stated that the route propo would be 400 miles shorter as a link between the great lakes and the Mississippi than the Rock Island and Hennepin canal, and would have sixty days longer season, free from ice in winter.

A Revolutionary Claim.

The Senate committee on revolutionary claims is not overburdened with work, and when a case comes before its members for consideration no one is more surprised than they are. The other day Mr. Robert H. Patton Tighe of New York came down to Washington and astonished the senatorial circles by asking for a hearing before this committee, of which Senator Cameron is chairman. He appeared as counsel for James Riley, who claims from the government the amount of pay that he asserts to be due to him for services rendered by his father in the revolutionary war, and for which his father never received compensation. A meeting was called, and Mr. Tighe appeared and made an argument on behalf of his client. The case has not yet een reported to the Senate.

A New Land Bill.

Representative McRae (Ark.) has introduced a bill for the entry by persons or associations of vacant lands not otherwise appropriated or reserved by competent authority, chiefly valuable for building stone. limestone, sandstone, granite, etc. The entry is not to exceed 160 acres for a person or 320 for an association, and the pay is to be \$2.50 per acre when the land is more than five miles from any completed railroad, and not less than \$5 per acre when within five miles of a railroad Confirmations.

The Senate has confirmed the following nominations:

Holmes Conrad of Virginia, to be solicitor general; J. M. Dickenson of Tennessee, to be assistant attorney general.

Postmasters: , Massachusetts - W. Keitz, at Campello; Millard F. Charles, at Reading: Timothy F. Hagerty, at Woburn. New York-Spalding Evans, at Lockport; Patrick Lillis, at Albion; Ralph Crook, at Rouses Point. New Jersey-B. P. Wills, at Mount Holly. Tennessee—William Moore, at Trenton. Michigan—L. B. Smith, at Muskegon; M. L. Seibert, at Marlette; W. S. Powers, at Mashville; O. R. Pierce, at Hudson; Wm. P. Nishett, at Big Rapids; E. R. Lacey, at Holly; E. C. Corey, at Olivet. California-E. E. Thrift, at Stockton; John H. Hayden, at Santa Maria. Idaho-Henry K. Hartley, at Caldwell. Connecticut-John L. Elliott, at Clinton. Also William Richmond, to be collector of listrict of Magara, N. Y

To Collect the Customs Revenue. In a letter to the House today Acting Secretary of the Treasury Hamlin estimates that \$7,476,723 will be necessary to collect the customs revenue for the fiscal year ending June 30, 1896. The expenses at some of the principal ports are estimated as follows: Boston, \$527,469; New York, \$2,265,996; office of the president of the general board of general appraisers, New York, \$99,535; Philadelphia, \$403,453; Baltimore, \$221,978; New Orleans, \$198,358; Chicago, \$142,528; Detroit, \$74,335; San Francisco, \$341.897; Portland, Ore., \$51.954; Port

Youthful Fugitives. Two colored boys, Aaron Pace and Alex-

ander Hayes, were in the Police Court procession today because they were picked up in the streets last night and taken in out of the cold. "I came from Atlanta, Ga.," said Aaron,

"I ran away from home with the circus 'and the men dropped me here." "Does your mother know where you

"No, sir, but I would like to get back to "And what about you?" the Hayes boy was asked.
"I'm fourteen years old," he answered, "I beat my way from Macon to Chattanooga, and from there I came here with

"Do you want to return? the boy answered. "I came here looking for a home and work, and I might just as well remain here as awav. Following these came Elmer Goodwin

an eleven-year-old colored boy, who has no parents. He was nearly frozen last night when the police found him in the street. An agent of the board of children's guardians will look after the boys.

Assaulted Her. Ten years ago Ben. Warfield, colored,

separated from his wife because she could no longer stand his abuse. Since then Ben has been arrested many times, and has had a rough time in many ways. Recently he wanted his wife to take him back, but this she declined to do, and he assaulted her. He now has a home in jail for sixty days.

Funeral of John M. Young. The funeral of the late John M. Young, the retired carriagemaker, who died Tuesday morning, took place this afternoon at 2 o'clock from his late home, No. 301 14th street southwest. Floral offerings from friends were numerous and handsome. The active pallbearers, selected from the Merchants' Club, of which deceased was a member, were L. A. Littlefield, E. G. Schaeffer, C. A. Langley, J. W. Thomas, James Cunningham and James D. Mankin. The honorary pullbearers were A. H. Stephenson, J L. Knox, W. R. Smith, W. H. Crosby, B. F. Green and Daniel Fraser. Rev. Byron Sunderland of the First Presbyterian Church, who was with the deceased during his last illness, officiated. Congressional cemetery is where the body found its last resting place. National Geographic Society.

At the meeting of the National Geographic Society which will be held at the Cosmus Club tomorrow night "Topographic Forms" will be discussed by Maj. Gilbert Thompson, Mr. Henry Gannett and Mr. G. W. Littlehales. Admission will be by membership card only.

For Heavy Damages.

The case of Robert Craig, a small boy, against Marx Kaufman, in which the plaintiff claims \$25,000 damages, was on trial before Judge Cole in Circuit Court No. 2 today. While in the store of the defendant on Capitol Hill in 1891 the boy fell through the cellar door, sustaining injuries which, it is claimed, have crippled him for life. On behalf of the plaintiff it was contended that the opening was left unguarded, while the defendant claimed "The greatest sufferers from imported that the boy was warned not to go near it.

> Bill in Equity. The District of Columbia Loan and Investment Company today filed a bill in equity against Jonathan H. Gray and others to foreclose deeds of trust on lots 106 and 107, square 375.

IF THE HAIR IS FALLING OUT OR TURNING gray the glands of the skin need stimulating and color food, and the best remedy and stimu-lant is Hall's Hair Renewer.

in the features is not sufficient to constitute real ugliness. A high forehead is nowaday! universally considered to be a misfortune. A pasty complexion is, no doubt,a calamity, Pendleton, G. C., Tex., 909 New York ave Pendleton, J. O., W. Va., 123 A n.e. Perkins, Geo. D., Iowa, Hamilton. Phillips, T. W., Pa., 1122 Vermont ave.

so is a long upper lip, and so is a large chin. But a girl's face may have any one of these characteristics-it may possess them all-without being positively ugly. An intelligent mind and a gentle spirit may de wonders in transforming a plain face and making it, if not beautiful, at least attractive. And the proof of this is the oftennoted fact that many plain-and even ugly -girls are led to the altar, while their handsomer sisters win admiration without inspiring love. It is when plain or badly formed features are the home of stupiditywhen they are unilluminated by a spark or a ray of generous feeling—that they form a truly ugly face. Such faces there are, and there are also no doubt faces cast by nature in so bad a mold that rothing will render them attractive, any more than a deformed figure can be made comely; but such ugliness is almost as rare as beauty itself. Men often excuse themselves from attendance on plain young women on the ground that they are not only ill-looking, but ill-tempered. There is, too, much truth in the charge. But the ugly girl is not without excuse. The consciou ness that no man or woman cares to look at her face a second time, joined to the sensitiveness she has acquired, is apt to sour her temper; and this, in its turn, tends to increase her ugliness. Yet it is a singular fact that if a man for any reason pays marked attention to a plain girl, she is apt to hold her chin half an inch higher in the air than a good-looking girl would do under the same circumstances. It would be futile to inquire into the reason of this tendency on the part of ugly girls to give themselves airs; but the fact is patent to

The coroner's jury at Milwaukee has re-turned a verdict in the Kinnickinnic avenue street-car accident, finding that the pe sons killed lost their lives through the negligence of Motorman Kennedy.
